

Veritas Access Appliance

Cost-optimized long-term retention.

OVERVIEW

The Veritas™ Access 3340 Appliance enables a turnkey deployment of Veritas' software-defined Access scale-out network-attached storage—a storage solution optimized for unstructured data use cases. The 3340 appliance is cost-optimized and tuned for high-capacity workloads like long-term retention (LTR), tape replacement and backup archiving.

The Access 3340 is deeply integrated with Veritas NetBackup™ and NetBackup CloudCatalyst, providing a turnkey, cost-optimized LTR solution for large-scale (PB) deployments where Veritas NetBackup is the primary backup utility.

TOP 5 REASONS TO DEPLOY ACCESS APPLIANCE

1. **Gain Deep Integration with NetBackup**—Integration with Veritas NetBackup and Veritas Enterprise Vault™ lets you deploy a single-vendor, end-to-end data protection solution from the leading vendor in data protection.
2. **Achieve Superior Price/Performance**—Access Appliance delivers near-primary storage performance at or near the price point of tape and cloud.
3. **Save Money with Intelligent Data Tiering**—Access Appliance delivers the performance required by demanding long-term retention SLAs, and policy-driven tiering to/from public or private clouds optimizes the total cost of ownership (TCO).
4. **Deploy with Confidence**—Storage software is in our DNA. Today, Veritas has the #1 worldwide market share in backup and recovery, archiving software and management software-defined storage (SDS) for 2017 by revenue.¹
5. **Reduce Management Costs**—Use a single pane of glass to manage multiple instances, including integration with Veritas NetBackup and Veritas Enterprise Vault.

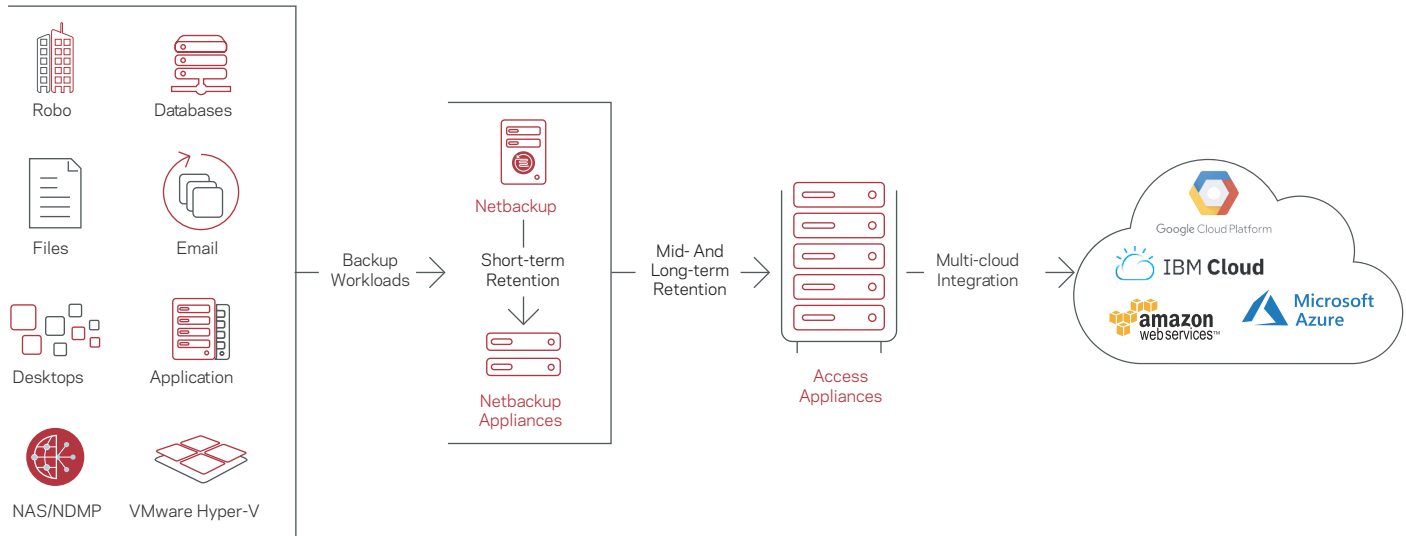

FILL THE COST/PERFORMANCE GAP

Access Appliance fills a cost/performance gap between costly primary storage and economic (but lower-performing) secondary storage like tape and public cloud. It allows large (PBs) of cost-effective, on-premises storage while giving administrators a much lower RTO (Recovery Time Objective). In short, the appliance provides performance comparable to primary storage with the cost profile of tape or cloud.

IMPROVE TCO WITH NETBACKUP INTEGRATION

Veritas Access Appliance can be an optimized primary or secondary target for NetBackup. If you're using NetBackup software on your own hardware, Access Appliance becomes a highly cost-effective primary target for deduplicated NetBackup backups. If you're combining Veritas appliances, the NetBackup Appliance is a high-performance primary store complemented by a cost-effective, dedupe-capable secondary store in Access Appliance. Regardless of the deployment, enterprises enjoy a single-vendor, end-to-end solution—with the efficiency of deduplication and compression maintained throughout the data lifecycle.

LOWER COSTS WITH MULTI-CLOUD TIERING

Access Appliance enables enterprises to embrace cloud adoption, with the ability to leverage on-premises private cloud or a range of off-premises cloud service providers as a low-cost storage tier. Cloud tiering gives IT professionals the tools to meet performance requirements while using automated tiering to orchestrate data migration of colder data to lower-cost media.

ABOUT VERITAS TECHNOLOGIES LLC

Veritas Technologies empowers businesses of all sizes to discover the truth in information—their most important digital asset. Using the Veritas platform, customers can accelerate their digital transformation and solve pressing IT and business challenges including multi-cloud data management, data protection, storage optimization, compliance readiness and workload portability—with no cloud vendor lock-in. Eighty-six percent of Fortune 500 companies rely on Veritas today to reveal data insights that drive competitive advantage.
